

# SAP Business ByDesign Features

SAP Business ByDesign is purpose-built for growing mid-sized businesses. It's an ERP, and a Business Management Solution rolled into one, hosted in the cloud, and delivered as a service. SAP Business ByDesign processes are divided into application areas with core business scenarios. These include:

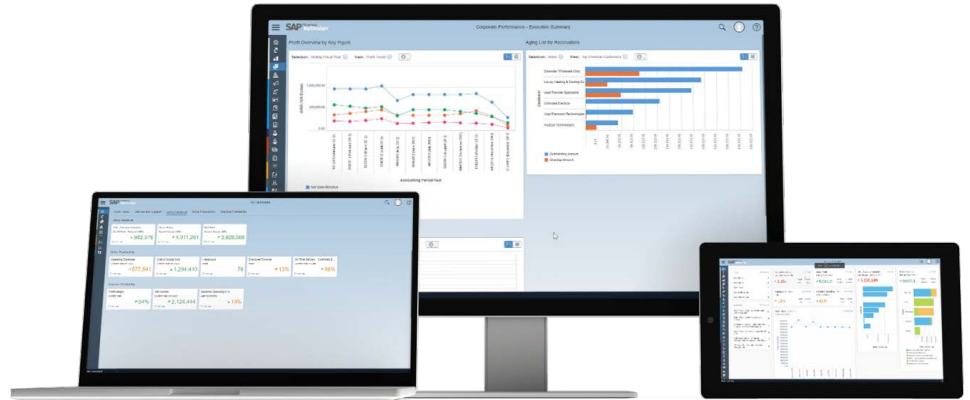

## Finance

### Financial and managerial accounting

With multiple operating units, currencies and reporting standards

### Cash Flow Management

Use customer and supplier transaction data to get real time cash flow visibility

## Customer Relationship Management

### Marketing

Lead effective campaigns and lead generation using personalized customer information

### Sales

Sales automation and account management improvement

### Service

Improve service delivery and customer satisfaction with BI tools and insights

## Human Resources

### Onboarding

Simplify onboarding and give employees and managers easy access to information

### Time, attendance, and labor management

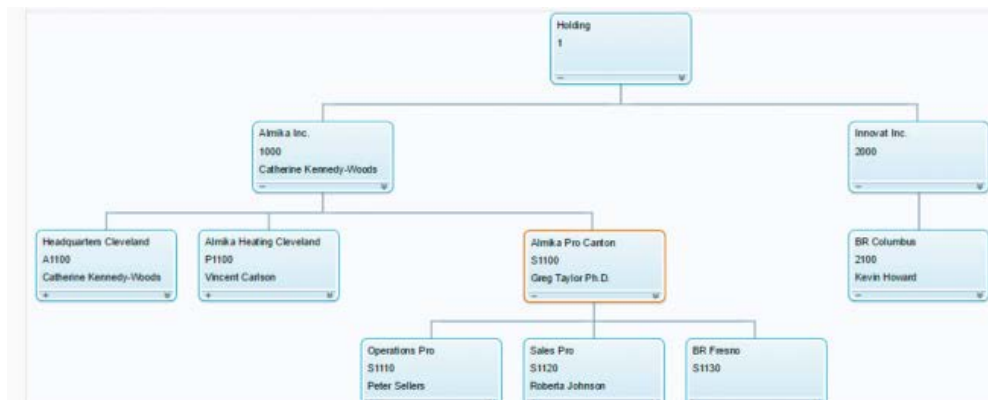

Employees can self-manage timesheets, procurement processes and personal info.

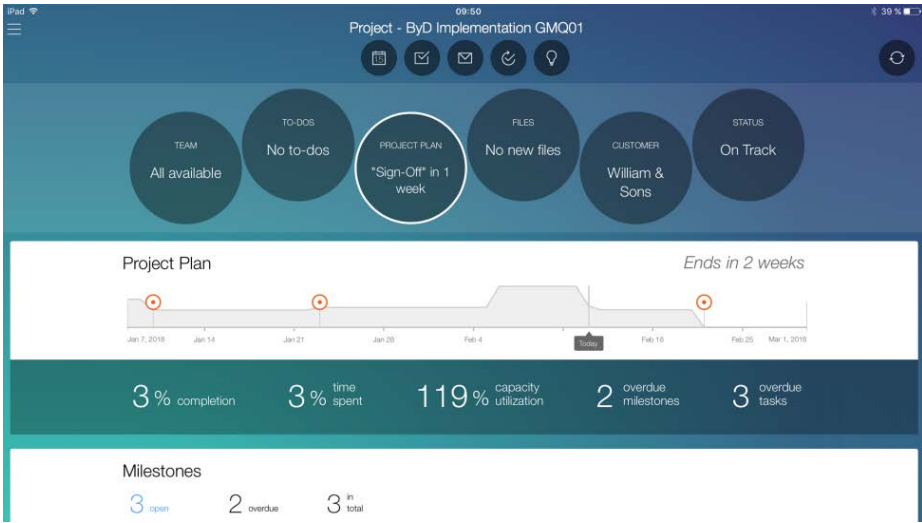

### Payroll

Simplified payroll processing with interfaces for third-party providers

### Request and approval

Easily create, monitor and approval purchase requests

# End-to-end business suite for Mid-Sized Enterprises

Use Cases  
Business ByDesign

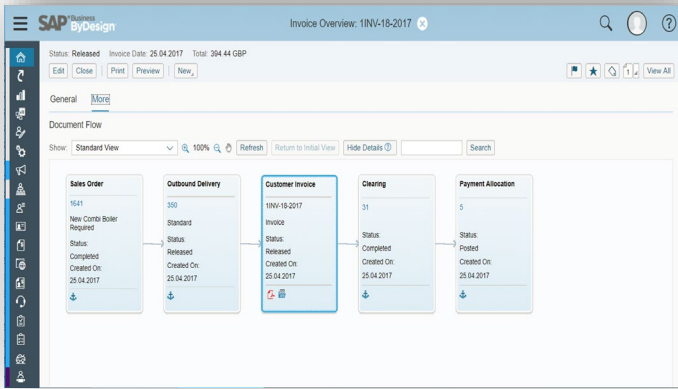

## 1 Fast time to value

The average small or medium business can implement in 12 weeks leveraging built-in best practices.

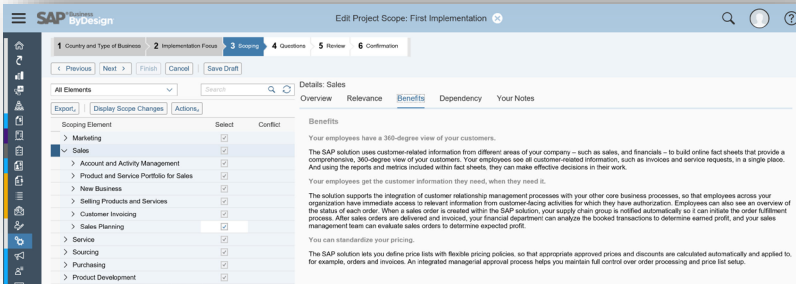

### Order-to-Cash (Sell-from-Stock) Scenario Overview

## 2 Manage your entire business on a single, unified platform. With the document flow feature, management has transparency to know the current status of an invoice, an order, or payment.

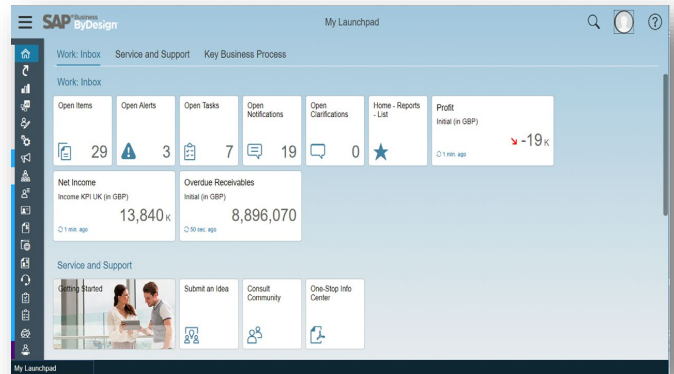

## 3

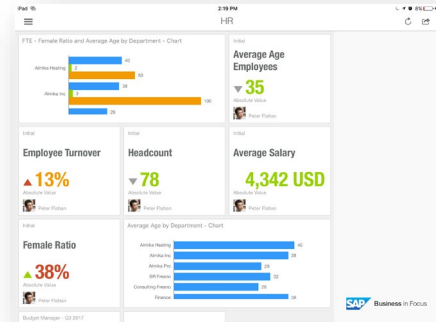

Intelligent Cloud ERP vs. Traditional ERP		I-ERP
Integrated finance data	○	✓
Embedded real-time analytics	✗	✓
Global Reach	✗	✓
Mobile Applications	○	✓

## 4 Comprehensive business suite

Architected to support your entire business end-to-end. Manage the complete customer journey with SAP's built-in best-in-class business processes, such as order-to-cash, procure-to-pay etc.

## 5 360° view of your business. Monitor the performance of your entire business from a single platform. Built in analytics and KPIs keep your business on track.

## 6 Information is accessible on the go. Users can approve invoices, contracts, or other workflow items from their mobile devices.
