

# Product Overview

## Resolv: Desktop & Mobility

Resolv is a fully-integrated suite of distribution, logistics and warehouse management software developed for and powered by SAP Business One. It is designed to optimize operations end-to-end, while streamlining and automating warehouse management, allowing you to reduce operating costs while increasing productivity, quality and revenue.

**Resolv Desktop** is a robust yet intuitive solution that runs the various Resolv modules from your desktop while **Resolv Mobility** allows users to extend the Resolv functionality to a handheld or tablet of their choice. The various modules allow users to tailor Resolv to meet the unique requirements of their specific business needs. The modules include:

### Equipment Rental

Resolv Equipment Rental is a single, integrated application, that helps organizations track and manage their rental processes more efficiently and effectively. As an extension of the desktop application it provides the flexibility to book and process rental transactions from a tablet or smartphone.

### Order-to-Cash (OTC)

Resolv Order-to-Cash (OTC) optimizes the order-to-cash workflow to connect and streamline OTC functions including order processing, credit checks, fulfillment, shipping, document management, invoicing and reporting. Dramatically improve customer service levels, profits and organizational efficiencies, while freeing up working capital and cash flow.

### Order Reservations

Resolv Order Reservations allows users to reserve inventory against available in-stock quantities, incoming Purchase Orders, Containers, Productions and Incoming Inventory Transfer Requests. This helps users meet customer expectations and allocate inventory to specific orders to enhance fulfillment.

### Third-Party Management (3PL)

Resolv Third-Party Management (3PL) provides a quick, easy way to manage and automate the integration of Transactional and Master Data with other systems and third-parties. This allows user level mapping with 3PL, Point of Sale Systems (POS) and any other system that is capable of XML based import and/or export.

### Quality Control

Resolv Quality Control will help transform your quality management processes into a collaborative environment for continual improvement and enhanced operations. It provides the ability to track quality throughout your facility, allowing you to make operational and procedural adjustments. This insight allows you to maximize profitability while improving customer satisfaction.

## Container Management

Resolv Container Management provides the features necessary to track inventory in containers, enabling users to efficiently identify what inventory is in containers, which containers, where the container is in transit, and all the associated landed costs.

## Freight Management

Resolv Freight Management serves as a bridge between SAP Business One and carrier shipping systems using Web Services to communicate to the carriers directly. The data is transmitted to the carrier's system to create and print labels without exiting SAP. It includes a Rate Shopping feature, which allows users to view shipping rates by carriers and shipping options.

## Data Messenger

Resolv Data Messenger transforms your SAP Business One data into a proactive digital communication platform for providing rich, timely and automated information to your customers, vendors, leads, employees and other partners.

## Advanced Allocations

Advanced Allocations allows you to create rules for autogenerating pick lists, so you do not have to manually use the Pick Pack manager all day long to create and release pick lists to your warehouse. This utilizes the Resolv Processor to automate this process.

## Warehouse Management (HANA)

Resolv WMS has been developed with SAP Fiori and SAP HANA, the innovative technology platform that uses flash memory instead of a hard drive to store and retrieve data. Access information quickly on tablets and smartphones, adding the freedom of speed with instant access to warehouse logistics network wherever Wi-Fi is available.

## Warehouse Management (MS-SQL)

Resolv Warehouse Management (MS-SQL) has the tools your company needs to accurately process orders and inventory in less time. Every function, from receiving and stocking, to picking and shipping, is designed to enable efficient processing. The system is designed to maximize productivity and retail compliance by providing a process for efficient warehouse operations with Radio Frequency (RF) handheld's, bar codes, and a pick pack ship software package that allows you to implement this process.
