 - ▶ Goods Receipt PO
 - ▶ Inventory Transfer Request
 - ▶ Inventory Transfer
 - ▶ Goods Issue
 - ▶ Goods Receipt

*“Resolv has really helped us provide more **accurate information to our team** and **ultimately our customers regarding the availability of our products**. The ability to track metrics more easily and calculate more accurate costs has proven to be a great benefit.”*

David Pearlman

Vice President at Welmed
Logistics & Inventory Management

Easily integrate with your logistics providers

Resolv Third-Party Management provides a quick, easy way to manage and automate the integration of transactional and master data with other systems and third parties.

This allows user level mapping with Third-Party Warehouses (3PL), Point of Sale Systems (POS) and any other system that is capable of XML based import and/or export.

Streamline transactional documents in one fluid process

You have the ability to setup import and export paths for transactional document processes as well as notifications based on each document movement.

These standard alerts notify the specified person of an import or export failure via an internal message or email. This ensures that all documents continue in the prescribed flow.

The Resolv Third-Party Management has the tools required to automate the transfer of documents and master data from your SAP Business One System and your third-party providers. **There is no programming to build or modify integrations and it support data connection types such as XML, SQL, ODBC, text and more.**

Document	Vendor	Contact	Name	Ware	Entry Date	Request Date	Document Amount	Date Sent
