

Date: December 15th, 2021

This release focuses on enhancements to the hourly scheduling workflow, the addition of an activity log in FieldVu Mobile, as well as a number of performance enhancements and bug fixes.

Hourly Scheduling Enhancements

For users of the hourly scheduling functionality in FieldVu Cloud, it's critical to be able to focus on a single day while still having the ability to easily reschedule events to different dates.

To accomplish this, we've limited the view to a single day while also providing the user the ability to toggle the timespan between a working day and the full 24hr day (use CTRL + mouse scroll). In addition, by right-clicking on a scheduled event the user now has the option to edit event, and assign it to a separate date.

These enhancements to the hourly scheduling screen will make it more resilient while still ensuring that the user has the functionality they need.

The screenshot displays the 'Scheduling - Hourly' interface in FieldVu. The top navigation bar includes the FieldVu logo, a search bar, and user information (1000 - ALMIKA). The main header shows 'Scheduling - Hourly' with 'SCHEDULE' and 'MAP' tabs. Below the header, filters for 'Branch' and 'Resource Type' are set to 'All'. The date is 'Dec 2, 2021'. The main grid shows a resource list on the left and a time-based schedule for Thursday. Resources listed include Payton Manning, Tom Brady, Serena Williams, Krishna GroundHog, Lee Morgan, my346110 User User, Bob Clifford, GroundHog raj, Jack Ingersoll, Carla Puente, Martin Wellington, Alicia Holmes2, Martin Candela, and Briana Polley. The schedule shows events for Job 1381 (Hudson Technologies) and Job 1384 (Hudson Technologies). A context menu is open over Job 1384, showing 'Edit event' and 'Unassign' options. The right sidebar shows 'Unassigned Work' with a search bar and a list of jobs (Job 1302 Silverstar Wholesale Corp Driver, Job 1302 Silverstar Wholesale Corp Backhoe, Job 1302 Silverstar Wholesale Corp Driver). A 'Provide Feedback' button is at the bottom right.

Activity Log

In FieldVu Mobile, field tickets and work orders have always had the ability to add a description to the document. This provides the opportunity to give an unstructured overview of what the associated document entails. However, some companies may want to include a more structured way of describing what activities occurred in relation to that ticket. Therefore, we have added the activity log tab to what can be shown for field tickets and work orders.

The activity log gives the user the ability to create a list of events that have some sort of start and end. Each of these fields are purely text-based, so they can be whatever the user needs. The start and end markers could be a date/time, mileage markers, etc.

The screenshot displays the FieldVu mobile app interface. At the top, there's a navigation bar with 'fieldvu mobile', 'Jobs', 'Tickets', and 'Work Orders'. Below this, the ticket details for 'Hudson Technologies' (1081 Field Service) are shown, along with a 'Ticket No.' field and a red 'Unsubmitted' status indicator. The 'Activity' tab is selected, showing a list of activities. Each activity entry includes a 'Notes' field, 'Start' and 'End' time/mileage markers, and a 'Date/Time' stamp. A table at the bottom lists several activities: 'Safety meeting', 'Lower pipe', 'Dig pipeline ditch', and 'Strip ROW'. A 'SAVE' button is visible at the bottom right.

Notes	Start	End	Date/Time
Debrief meeting	5:00pm	5:15pm	
Safety meeting	7:30am	7:45am	2021-12-10 11:40:45
Lower pipe	0m	125m	2021-12-10 11:40:30
Dig pipeline ditch	125m	400m	2021-12-10 11:40:15
Strip ROW	400m	700m	2021-12-10 11:39:58

As all companies may not require the activity tab, it is only shown when the proper configuration is in place.
